

In order to execute the script, first cd to the directory in which you will be executing the script. Then ls to make sure that there is both the extraCredit script as well as an input file, titled input_file which contains a list of names in the format First,Last. Execute the script by typing ./extraCredit. The script will then ask you for the name of the input file to execute. Enter input_file and hit enter, and the script will create the directory for each name on the list, in the format Last_First. ls in the directory to see a list of sub-directories that have just been created via the script.
